

COUNTRY PROFILE

M.COBB, USAID/SENEGAL

For every 100 Senegalese babies born, six die before their first birthday. Although this rate is an improvement over the past, it is still too high. USAID, the Government of Senegal, and local communities are working together to change that. At the District Health Center in Ziguinchor, a local health committee bought a warming table for newborn babies and, with USAID support, trains all its nurses in essential newborn care techniques. "This is the first time we have had a tool to warm babies," said midwife Bintou Ndour. Newborn care ranges from basic pre- and post-natal preventive care to resuscitating babies and managing infections.

OVERVIEW

Senegal has progressed significantly in the past decade, both politically and economically. In 2009, the country signed a \$540 million compact with the Millennium Challenge Corporation. Senegal is a moderating voice in the Islamic and African worlds as a democratic, predominantly Muslim, secular country. In coordination with our Senegalese partners, USAID works to enhance lives by creating jobs, improving access to education and health care, further institutionalizing democracy and developing the agriculture sector in order to increase production and incomes.

PROGRAMS

ECONOMIC GROWTH

Under the framework of the African Union, the Government of Senegal has prioritized agriculture as a vehicle for pro-poor economic growth and greater rural food security. The U.S. Government's Feed the Future Initiative supports the country's efforts by enabling agricultural-led development. Objectives include meeting the demand for food, supporting and facilitating access to strong markets, increasing incomes for the poor and improving nutrition, especially for women and children.

With half of Senegal's youth unemployed, the country urgently needs jobs. In an effort to speed Senegal's growth and the country's capacity to produce and manufacture goods rather than just trade them, USAID helps citizens generate income from local resources, connect to markets, and manage the country's natural resources. In 2003-08, USAID assisted 4,180 producers groups and private enterprises to market natural products (such as baobab, madd, and gum mbepp) and nontraditional agricultural products (such as cashews and fonio) for national consumption and export markets. Nearly 3,600 groups were able to increase their revenues by more than 93 percent, and 1,700 new jobs were created.

INVESTING IN PEOPLE: HEALTH

Substantial improvements have been made in the health sector over the previous decades, including a drop in infant and maternal mortality. In an effort to further decrease these rates, USAID supports birth spacing campaigns and prenatal care. To limit the spread of HIV/AIDS, USAID has worked to increase access to and use of quality health services,

SENEGAL SNAPSHOT

Date of independence: 1960
Population: 12.5 million (2007)
GDP per person: \$700 (yr)

COUNTRY PROFILE CONTINUED

especially for high risk and vulnerable groups. In 2009, 44,670 people received HIV/AIDS counseling and testing. USAID also works to reduce malaria-related deaths by targeting children and pregnant women. In 2009, USAID's President's Malaria Initiative purchased and distributed 452,234 bednets and provided funding for logistics costs related to the distribution of another 1,875,456. In addition, the program protected 661,814 people in nearly 176,279 households from malaria with indoor residual spraying.

INVESTING IN PEOPLE: EDUCATION

Approximately 57 percent of Senegal's men and 66 percent of its women over 15 years old are illiterate. Since universal primary education is nearly attained, USAID works to ensure that future generations are literate and better prepared for the global marketplace by instead supporting higher-quality middle school education and broader accessibility, especially for girls. By 2009, USAID had built or renovated 67 middle schools, allowing more than 42,000 new students to attend middle schools within walking distance of their homes. In 2010, it is also working with the Government of Senegal to build host country capacity to construct nine more schools. Programs seek to create participatory communities and improve the quality of teaching so that all children have access to quality basic education at the middle school level. Additionally, funds will be dedicated to ensuring that vulnerable and street children, many of whom participate in the Koranic (Islamic) school system in Senegal, get increased educational support.

PEACE AND SECURITY

After more than two decades of conflict, peace remains elusive in Senegal's southern Casamance region. USAID's program on national reconciliation supports peace-building activities such as grassroots conflict resolution, peace process advocacy, and training to build local negotiation and conflict resolution skills.

GOVERNING JUSTLY AND DEMOCRATICALLY

While Senegal remains one of the few stable democracies in West Africa, it is increasingly becoming a highly centralized government where weak checks and balances undermine good governance. U.S. assistance will expand efforts to promote government-wide transparency and accountability. Governance issues are also systematically integrated in each sector program.
